Based in China · Open to EU/UK, North America, ANZ
Visa sponsorship required

MSc in Interactive Media from the School of Computer Science & IT at University College Cork, on top of a BSc in Applied Mathematics (Data Computation). I map how a business process really runs, then design and build the tool, integration or AI-assisted step that improves it, and help people adopt it. My current Amazon operations work in Europe and North America keeps me close to the systems those must fit.

EXPERIENCE

E-commerce Operator Specialist · Triple A internetshops GmbH May 2026 – Present · Shenzhen

- Run Amazon operations for 8 European marketplaces (incl. UK, DE, FR, IT, ES) and 3 in North America (US, CA, MX), each with 2,000+ ASINs, in a business with eight-figure annual revenue (USD).
- Analyse sales, traffic, fee and competitor data to locate the real problems in the store, then act on them through listing copy, localisation and advertising campaigns.

Data Platform Full-stack Engineer · Sun Yat-sen University Jan 2026 – Apr 2026 · Shenzhen

- Co-developed a real-time monitoring platform connecting data ingestion, storage, analysis and reporting.
- Integrated InfluxDB and MySQL time-series data for monitoring and anomaly analysis, surfaced in map and status dashboards.

Data Analyst & Research Assistant · MaREI, University College Cork May 2025 – Sep 2025 · Cork, Ireland

- Turned an Excel-based research process into a web decision tool with adjustable criteria, weights and live rankings, used by a 7+ person research team to compare five tyre-recovery alternatives.
- Built MCDA models and Python pipelines for data cleaning, validation and sensitivity analysis, making decision criteria explicit for non-technical stakeholders.

SELECTED PROJECTS

MCDA Tool — process to tool · JavaScript, D3.js, Excel, Node.js — Replaced a spreadsheet workflow with a web tool where trade-offs are visible; weighted ranking, TOPSIS, Pareto and sensitivity views.

Drone Monitoring — data flow & integration · React, WebSocket, InfluxDB, Docker — Connects an HTTP API, time-series storage and a WebSocket feed into a live dashboard; personal demo alongside the co-developed production platform.

Connoisseur — business systems · Next.js, TypeScript — Sourcing workflow MVP linking requests, quotes, payment states and customer case histories, with customer and admin views.

MoTai — applied AI workflow · Electron, LLM APIs — Local-first desktop prototype combining structured context, LLM generation and author review in one workflow.

EDUCATION

MSc Interactive Media · School of Computer Science & IT, University College Cork Sep 2024 – Mar 2026
Second Class Honours (2:1), top 10% · Web application development, iOS agile development, virtual reality, 3D modelling, audio and video engineering

BSc Applied Mathematics (Data Computation) · Taiyuan University of Science and Technology Sep 2020 – Jun 2024
Top 10% of cohort · Machine learning, deep learning, neural networks, image recognition, SQL, Python, Java, probability & statistics, linear algebra, optimisation

SKILLS

Process & analysis	Process mapping (current / future state), requirements and acceptance criteria, stakeholder walkthroughs, KPI analysis
Data & BI	SQL, MySQL, Python, Power BI, Excel, data cleaning, sensitivity analysis, InfluxDB
Systems & integration	JavaScript/TypeScript, React, Node.js, HTTP APIs, WebSocket, Docker, Git
Applied AI	LLM API integration, structured context, human-in-the-loop review, workflow prototyping
Marketplace tools	Amazon Seller Central, Helium 10, Keepa, Amalytix
Languages	English (IELTS 6.5; studied and worked in Ireland), Chinese (native)
